WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Make two, one a mirror image of the other. Aluminium RHS 50 x 40 x 3, the 50 face vertical; the 40 depth runs away from the trunk. Length 175 along the trunk-side face; the inner end is cut at 30 deg so it lies flat on the spine.
TIG weld a 3 mm aluminium cap on the outer end (ER5356). No vent hole: the frame is not galvanised.
Drill two 9.0 holes through the trunk-side face only, 53 and 138 from the inner end on the centre line; after welding set M6 countersunk-head stainless rivet nuts in them, flush.
The two bars meet the spine at its foot and form a V with 120 deg between their trunk-side faces.

TRUNKBELAY github.com/BoujeeEnjinia1701/trunkbelay

TrunkBelay: bearing bar (make 2, opposite hands)

DRAWING NO.	REV	SHEET	SIZE
