WHERE IT GOES
This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

One piece of 5 mm 6082-T6 plate, waterjet or laser cut. Outline:
front edge (the edge toward the trunk): 175 long at the bottom, 175 high at the front; 55 high at the back end; the top runs 60 back from the front edge, then slopes down.
Holes: load eye 22 at 150 back, 28 up; spare eye 22 at 70 back, 28 up; lightening hole 36 at 85 back, 90 up.
Chain slots: two, 7.5 wide, 25 deep from the top edge, centred 15 and 43 back from the front edge. Cut them square and file every edge smooth; no burr may touch chain.
Lock pin hole 8.5 at 29 back, 139 up (drill after the cheeks are welded on, through all three plates).
Do not thicken the plate: a link must span it (5 mm only).
Round the eye edges to 2 mm radius after the rings go on.
