WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Make two. 6 mm plate, 60 long x 45 high.

Two notches from the top edge, 22 wide and 27 deep, centred 15 and 43 from the front end, so they sit round the two chain slots in the spine with 7.25 of web showing each side.

Weld one on each face of the spine, top edges flush with the spine top, front ends flush with its front edge: 4 mm fillets along the bottom and the back end only (keep the notches and the top clean).

Then drill the 8.5 lock pin hole through cheek, spine and cheek together, 29 from the front, 139 up from the frame foot.
