WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Cut a cross from 3 mm sheet: a bridge 56 long (front to back) x 23 wide, with a leg 6 wide and 43 long at the middle of each long side.

Bend both legs down 90 deg so they sit 17 apart inside: they slide over the two cheeks between the notches.

Drill 8.5 through both legs, 39 below the bridge's top face.

The bridge lies on the cleat top across both slot mouths, so a chain link cannot lift out of its slot.

Tie the lock pin's lanyard to one leg.
